Arizona Department of Mines and Mineral Resources Mining Collection

ACCESS STATEMENT

These digitized collections are accessible for purposes of education and research. We have indicated what we know about copyright and rights of privacy, publicity, or trademark. Due to the nature of archival collections, we are not always able to identify this information. We are eager to hear from any rights owners, so that we may obtain accurate information. Upon request, we will remove material from public view while we address a rights issue.

CONSTRAINTS STATEMENT

The Arizona Geological Survey does not claim to control all rights for all materials in its collection. These rights include, but are not limited to: copyright, privacy rights, and cultural protection rights. The User hereby assumes all responsibility for obtaining any rights to use the material in excess of "fair use."

The Survey makes no intellectual property claims to the products created by individual authors in the manuscript collections, except when the author deeded those rights to the Survey or when those authors were employed by the State of Arizona and created intellectual products as a function of their official duties. The Survey does maintain property rights to the physical and digital representations of the works.

QUALITY STATEMENT

The Arizona Geological Survey is not responsible for the accuracy of the records, information, or opinions that may be contained in the files. The Survey collects, catalogs, and archives data on mineral properties regardless of its views of the veracity or accuracy of those data.

DEPARTMENT OF MINERAL RESOURCES

STATE OF ARIZONA
FIELD ENGINEERS REPORT

Mine 'AMERICAN and 'MEXICAN GULCHES x Date January 25, 1963
District Green Valley District, Gila County Engineer Lewis A. Smith
Subject: Letter from Alex L. Singley, Payson 1-23-63

Location: West foot of Snowstorm Mountain, 4 miles west of Payson, (S 11,
T 10 N, R 9 E)

Work: The last work was done in 1912.

The mine is developed by a drift adit which is now in poor condition.

Geology: The workings are along a fissure vein in Greenstone of the Mazatzal Formation group. These greenstones appear to be metamorphic derivatives from volcanic flows or other igneous rocks. The vein, like other fissure structures in the area, trends NW-SE. The vein carries gold, silver and mercury.
